# Employee Management

Submit Assignment

Due No Due Date Points 15 Submitting a website url

Create a React Application that has the following features:

- Employee Management application
- Page to Add a new Employee
- Page that lists all the employees that have been added
- On the list page, there should be an option to edit a particular employee and delete a particular employee
- In case the edit button is clicked for a particular employee, a page should open up similar to the add new employee page but pre-filled with the data of the employee that needs to be edited.
- All separate pages should be in separate routes like (/list, /add, /edit, etc)
- No backend is necessary, all functionalities should be managed via states in the front-end application only. You may like to use the redux toolkit as well.
- Employee Details would include:
  - Full name - must not be able to enter anything other than A-Z
  - Birthdate - via date picker
  - Department - Anything
  - Experience - A number only (in years)
- Provide GitHub Repo link which contains your solution code.

Evaluation Criteria

- Code readability, proper comments, unused and commented code: 3 Points
- Code logic for list employee: 3 Points
- Code logic for add and edit employee: 5 Points
- Code logic for routing: 4 Points
